

NMS Elective Guide 2021-2022

6th Grade Electives

Exploring Two-Dimensional Art/Keyboarding

Visual Art will be offered digitally beginning in the 2021-2022 school year. Computer Applications will be a primary tool taught for developing Graphic Design skills. Classes are taught in a Studio Art environment where repeated practice and active participation is the community standard.

6th Grade students are offered a yearlong course consisting of equal semesters of Computer Applications for Business and Studio Art 1. The year begins with students learning to use Microsoft Office 365 products and Ibis Paint as creative tools. The second half of the year students apply their technology skills to the study and creation of artwork.

Coding

The 6th grade coding course covers the problem-solving process and programming activities to encourage students to build their own programs for apps and physical computing devices.

Robotics

This course is an introductory course in Robotics. We will be utilizing VEX IQ Robotics kits and materials. The objective of this course is to introduce the student to engineering and engineering problem solving, as well as basic programming. The course will involve students in the development, building and programming of a VEX IQ Robot. Students will work hands-on in teams to design, build, program, and document their progress. Also, student designed robots will be programmed to compete in various VEX IQ Challenge Games.

Beginning Band

Students with little or no instrumental experience develop foundational instrumental technique, foundational music literacy, and aesthetic musical awareness through rehearsal, performance, and study of high-quality band literature. Instrumentalists work on the fundamentals of music notation, sound production, instrument care and maintenance, and personal and group rehearsal strategies. Public performances may serve as a culmination of specific instructional goals. Students may be required to attend and/or participate in rehearsals and performances outside the school day to support, extend, and assess learning in the classroom. This course may also require students to obtain a musical instrument (e.g., borrow, rent, purchase) from an outside source.

Physical Education

The purpose of this course is to provide a foundation of knowledge, skills, and values necessary for the development of a physically active lifestyle. The course content provides exposure to a variety of movement opportunities and experiences which includes, but is not limited to: Fitness Activities, Educational Gymnastics and Dance, and Team Sports. The integration of fitness concepts throughout the content is critical to student success in this course and in the development of a healthy and physically active lifestyle.

Dance I

Students develop dance technique and movement vocabulary in two or more dance forms. In the process, dancers demonstrate use of class and performance etiquette, analytical and problem-solving skills, and studio practices in a safe dance environment. Students may be required to attend and/or participate in rehearsals and performances outside the school day to support, extend, and assess learning in the classroom. Students in this class may need to obtain (e.g., borrow, purchase) appropriate footwear and/or dance attire from an outside source.

M/J Law Studies

The social studies curriculum for this course consists of the following content area strands: Geography, Civics and Government. The primary content for this course pertains to the principles, functions, and organization of the American legal system. The content should include, but not be limited to, the purpose of law, the role of citizens, the impact of laws on the lives of citizens, civil and criminal laws, fundamental civil and criminal justice procedures, causes and effects of crime, consumer and family law, comparison of adult and juvenile justice systems, and career opportunities in the legal system. Students will study methods of historical inquiry and primary and secondary historical documents.

M/J STEM Astronomy and Space Science

This course is an integrated Science, Technology, Engineering and Mathematics (STEM) course for middle school students. M/J STEM Physical Science includes an integration of standards from science, mathematics, and English/Language arts (ELA) through the application to STEM problem solving using physical science knowledge and science and engineering practices. Physical sciences through applications such as aeronautics, robotics, rocketry, mechanical, electrical, and civil engineering, are emphasized in this course. Laboratory investigations that include the use of scientific inquiry, research, measurement, problem solving, laboratory apparatus and technologies, experimental procedures, and safety procedures are an integral part of this course. The National Science Teachers Association (NSTA) recommends that at the middle school level, all students should have multiple opportunities every week to explore science laboratory investigations (labs). School laboratory investigations are defined by the National Research Council (NRC) as an experience in the laboratory, classroom, or the field that provides students with opportunities to interact directly with natural phenomena or with data collected by other using tools, materials, data collection techniques, and models (NRC, 2006, p. 3). Laboratory investigations in the middle school classroom should help all students develop a growing understanding of the complexity and ambiguity of empirical work, as well as the skills to calibrate and troubleshoot equipment used to make observations. Learners should understand measurement error; and have the skills to aggregate, interpret, and present the resulting data.

M/J Speech and Debate

The purpose of this course is to develop students' beginning awareness, understanding, and application of language arts as it applies to oral communication concepts and strategies in a variety of given settings.

The content should include, but not be limited to, the following:

- learning and practicing a variety of speech forms
- learning and demonstrating appropriate formal and informal public speaking techniques for audience, purpose, and occasion
 - eye contact and body movements
 - voice register and choices of language arts
 - use of standard English
- using research & writing skills to support selected topics and points of view
 - across a range of disciplines
 - using a range of sources, including digital
 - collaboration amongst peers, especially during the drafting and practicing stages

Chorus 1

Students with little or no choral experience develop beginning vocal technique and skills, critical and creative thinking skills, and an appreciation of music from around the world and through time. Public performances may serve as a culmination of specific instructional goals. Students may be required to attend and/or participate in rehearsals and performances outside the school day to support, extend, and assess learning in the classroom.

Peer Counseling I

The purpose of this course is to enable students to develop awareness of self and others. Emphasis will be on acquisition of basic skills for thoughtful planning, peer facilitation, effective communication and making healthy choices.

Global Scholars I

The Global Scholars Program is an innovative program in its fourth year in Broward County Public Schools. Nova Middle School was fortunate enough to be selected as one of the schools to help introduce this international curriculum to our students and families in Broward County Public Schools. The Global Scholars curriculum prepares students for global interaction, positive communication techniques, diversity, community empowerment, inclusion, and many other social skills that are relevant in our society today. Our students are very involved with community service, civic action, and responsibilities. The curriculum design of the Global Scholars Program helped us to dovetail our current practices into the curriculum implementation of this innovative program with significant global impact.

Digital Literacy

In Digital Literacy, students will earn their Internet Core Competency (IC3) Certification. The **IC3 certification** is a global benchmark for basic computer literacy, including operating systems, hardware, software, and networks. The test is administered by Certiport®. The three components that you could be certified in are Living Online, Key Applications, & Computer Fundamentals.

Brand Smart

In today's increasingly digitalized society where a person's social media presence can be a determining factor on what university they are accepted into or what job are they are offered, the term personal brand is becoming synonymous with reputation.

So, what would your personal brand say about you?

With social media as a prime platform, students will learn digital responsibility, leadership, ethics, online etiquette, networking, and portfolio building commencing a life long journey of being ...Brand Smart ... empowering student's one digital foot print at a time...

7th/8th Grade - Middle School Credit Courses

Band (Grades 7 & 8)

Students with previous band experience build on instrumental technique, music literacy, and aesthetic response through rehearsal, performance, and study of a variety of high-quality band literature. Instrumentalists expand their knowledge of music notation, music theory, sound production, and personal and group rehearsal strategies. Public performances may serve as a culmination of specific instructional goals. Students may be required to attend and/or participate in rehearsals and performances outside the school day to support, extend, and assess learning in the classroom. This course may also require students to obtain a musical instrument (e.g., borrow, rent, purchase) from an outside source.

Digital Media (Grades 7 & 8)

This elective is offers students an introduction to photojournalism. Seventh and eighth grade students are expected to chronicle all school-related events by taking photographs and writing stories about them. Students learn caption writing, photo-editing, and article writing. Throughout the year, students are assigned multimedia projects on an array of topics, which culminates on the final project, which is the school yearbook.

M/J Journalism (Grades 7 & 8)

Students interested in television, public speaking, and satellite communications will find the WNMS Broadcasting Program an excellent choice. Visual communication skills are developed through the use of cameras, video and computers. While developing writing, speaking, and computers skills, students can explore the areas of television production, marketing, advertising, and public relations. Students produce a live daily news show with special features produced by the student team of reporters.

M/J Chorus (Grades 7 & 8)

Students build on previous choral experience to expand vocal, technical, musical, and ensemble skills through rehearsal, performance, and study of high-quality choral literature. Singers focus on increasing knowledge of music theory, music literacy, and aesthetic response. Public performances may serve as a culmination of specific instructional goals. Students may be required to attend and/or participate in rehearsals and performances outside the school day to support, extend, and assess learning in the classroom.

Physical Education (Grades 7 & 8)

The purpose of this course is to provide a foundation of knowledge, skills, and values necessary for the development of a physically active lifestyle. The course content provides exposure to a variety of movement opportunities and experiences which includes, but is not limited to: Fitness Activities, Educational Gymnastics and Dance, and Team Sports. The integration of fitness concepts throughout the content is critical to student success in this course and in the development of a healthy and physically active lifestyle.

Peer Counseling (Grades 7 & 8)

The purpose of this course is to enable students to develop awareness of self and others. Emphasis will be on acquisition of basic skills for thoughtful planning, peer facilitation, effective communication and making healthy choices.

Finding NEMA: Nova Enrichment in Marine Art (Grades 7 & 8)

NEMA is a marine science class that integrates science with creating art. Students will develop fine art skills and paint watercolor ocean subjects in teacher directed activities. The sciences studied include chemistry of seawater, the physics of ocean movement and the diverse biology of the plants and animals that make the ocean home. The course emphasis is on Florida's coral reef ecosystems.

Let's Go Fishing! (Grades 7 & 8)

Let's Go Fishing is a marine science elective that teaches science utilizing fishing and boating. The course objective is to introduce students to the marine environment that is unique to South Florida.

The curriculum includes:

- Studies of many types of fish found off Florida's coast
- Ecology of fish habitats
- Fishing techniques
- Boat-vessel types and operations
- Diving apparatus
- Aquarium setup and maintenance

Global Scholars (Grade 7 & 8)

The Global Scholars Program is an innovative program in its fourth year in Broward County Public Schools. Nova Middle School was fortunate enough to be selected as one of the schools to help introduce this international curriculum to our students and families in Broward County Public Schools. The Global Scholars curriculum prepares students for global interaction, positive communication techniques, diversity, community empowerment, inclusion, and many other social skills that are relevant in our society today. Our students are very involved with community service, civic action, and responsibilities. The curriculum design of the Global Scholars Program helped us to dovetail our current practices into the curriculum implementation of this innovative program with significant global impact.

Creative Writing (Grade 7 only)

The purpose of this course is to enable students to learn and use grade 6 writing and language skills for creative expression in a variety of literary forms. Emphasis will be on development of a personal writing style.

The content should include, but not be limited to, the following:

- a study of a variety of short literary collections, including poetry, one-act plays, the short story, and memoir to determine and practice
 - literary text craft and structure
 - use of figurative, denotative, and connotative language
 - appropriate voice and/or tone
 - story structure, poetic forms, and creative pacing techniques
 - reciprocal nature of content and form
- writing for varied purposes and in varied genres, including
 - personal and dramatic narratives
 - various poetic forms
 - plays and multimedia productions
 - multi-genre and creative nonfiction selections
 - digital writing platforms
- effective listening, speaking, and viewing strategies with emphasis on the use of evidence to support or refute a claim in multimedia presentations, class discussions, and extended text discussions
- collaboration amongst peers, especially regarding peer reviews of multiple drafts

M/J Digital Art and Design (Grades 7 & 8)

Students explore the fundamental concepts, terminology, techniques, and applications of digital imaging to create original work. Students produce digital still and/or animated images through the single or combined use of computers, digital cameras, digital video cameras, scanners, photo editing software, drawing and painting software, graphic tablets, printers, new media, and emerging technologies. Through the critique process, students evaluate and respond to their own work and that of their peers to measure artistic growth. This course incorporates hands-on activities, the use of technology, and consumption of art materials.

Pre-Law (Grade 7 only)

In Pre-Law, students learn the foundations of civics and law. Students study historical documents like the Declaration of Independence, The Articles of Confederation, and The United States Constitution. Students learn about the 3 branches of government; especially the Supreme Court. Approximately 5 mock trials are conducted throughout the year to give students the chance to put their newfound legal knowledge to practice. Students learn how to research, articulate their thoughts, argue in a structured manner and think critically on their feet, and under pressure.

The last quarter of the year is dedicated to advocacy. Students take on a case of their choice and learn how to effect change through the proper legal and governmental channels. Students learn how to make their voices heard in their community about issues that matter to them.

M/J STEM Life Science (Grade 7 only)

This course is an integrated Science, Technology, Engineering and Mathematics (STEM) course for middle school students. M/J STEM Life Science includes an integration of standards from science, mathematics, and English Language arts (ELA) through the application to STEM problem solving using life science knowledge and science and engineering practices. Life science through applications such as biotechnology and biomedical engineering, are emphasized in this course. Laboratory investigations that include the use of scientific inquiry, research, measurement, problem solving, laboratory apparatus and technologies, experimental procedures, and safety procedures are an integral part of this course. The National Science Teachers Association (NSTA) recommends that at the middle school level, all students should have multiple opportunities every week to explore science laboratory investigations (labs). School laboratory investigations are defined by the National Research Council (NRC) as an experience in the laboratory, classroom, or the field that provides students with opportunities to interact directly with natural phenomena or with data collected by others using tools, materials, data collection techniques, and models (NRC, 2006, p. 3). Laboratory investigations in the middle school classroom should help all students develop a growing understanding of the complexity and ambiguity of empirical work, as well as the skills to calibrate and troubleshoot equipment used to make observations. Learners should understand measurement error; and have the skills to aggregate, interpret, and present the resulting data (NRC 2006, p. 77; NSTA, 2007). This is a core Science course.

M/J STEM Physical Science (Grade 8 only)

This course is an integrated Science, Technology, Engineering and Mathematics (STEM) course for middle school students. M/J STEM Physical Science includes an integration of standards from science, mathematics, and English/language arts (ELA) through the application to STEM problem solving using physical science knowledge and science and engineering practices. Physical sciences through applications such as aeronautics, robotics, rocketry, mechanical, electrical, and civil engineering, are emphasized in this course. Laboratory investigations that include the use of scientific inquiry, research, measurement, problem solving, laboratory apparatus and technologies, experimental procedures, and safety procedures are an integral part of this course. The National Science Teachers Association (NSTA) recommends that at the middle school level, all students should have multiple opportunities every week to explore science laboratory investigations (labs). School laboratory investigations are defined by the National Research Council (NRC) as an experience in the laboratory, classroom, or the field that provides students with opportunities to interact directly with natural phenomena or with data collected by other using tools, materials, data collection techniques, and models (NRC, 2006, p. 3). Laboratory investigations in the middle school classroom should help all students develop a growing understanding of the complexity and ambiguity of empirical work, as well as the skills to calibrate and troubleshoot equipment used to make observations. Learners should understand measurement error; and have the skills to aggregate, interpret, and present the resulting data (NRC, 2006, p. 77; NSTA, 2007). This is a core Science course.

Start Up Tech (Grade 7 only)

Start Up Tech is a course focused on the principles involved in creating and managing an app based business. The focus of study involves the development of designing and coding an app as well as strategies on how to monetize the app if and when it is published for commercial consumption.

Robotics II (Grade 7 only)

This is a beginning 18-week course in robotics. This course will continue to explore and extend the Robotics I course, as well as general Engineering Design Principles. VEX V5 Robotics kits and materials will be utilized. Students will be introduced to the VEX V5 Robotics Design System while learning key STEM principles. The objective of this course is to explore topics in engineering and engineering problem solving, as well as basic programming. The course will involve students in the development, building and programming of a VEX V5 Robot. Also, student designed robots will be programmed to compete in various VEX V5 Challenge Games.

Coding II (Grade 7 only)

The purpose of this 18-week course is to cover the advanced activities involving the problem-solving process and programming activities to encourage students to build their own programs for apps and physical computing devices.

League of Extraordinary Mathematics (Grades 7 & 8)

This course is designed to extend skills in problem solving taught in MathCounts, to foster mathematical creativity, rapid thinking at an advanced level, and to prepare students for competitions. This course will enforce concepts learned in their current math class as well as prepare students for future high school level math classes and SATs. As students' progress through the course, they will explore a variety of math topics including advanced concepts from number theory, probability, algebra, and geometry, as well as complete timed practice AMC 8, BCCTM, and MathCounts mock competitions to help them prepare for real competitions.

Dance (Grades 7 & 8)

Students attend to alignment, acquisition of complex technical skills, collaborative problem solving, dance conditioning, and safe studio practices. They learn about dance in its cultural and historical contexts through research and physical experiences, explore exemplary modern works, employ dance as a healthy life skill, and use dance terminology appropriately to describe the expressive and aesthetic qualities of performance. Public performances may serve as a culmination of specific instructional goals. Students may be required to attend and/or participate in rehearsals and performances outside the school day to support, extend, and assess learning in the classroom. Students in this class may need to obtain (e.g., borrow, purchase) appropriate footwear and/or dance attire from an outside source.

Digital Literacy (Grade 8 only)

In Digital Literacy, students will earn their Internet Core Competency (IC3) Certification. The **IC3 certification** is a global benchmark for basic computer literacy, including operating systems, hardware, software, and networks. The test is administered by Certiport®. The three components that you could be certified in are Living Online, Key Applications, & Computer Fundamentals.

7th/8th Grade - High School Credit Courses

Law Studies/Legal Concepts (Grade 8 only)

The Law Studies course consists of the following content area strands: American History, World History, Geography, Humanities, Economics, and Civics and Government. The primary content for the course pertains to the study of the American legal system as the foundation of American society by examining those laws which have an impact on citizens' lives and an introduction to fundamental civil and criminal justice procedures. Content should include, but is not limited to, the need for law, the basis for our legal system, civil and criminal law, adult and juvenile courts, family and consumer law, causes and consequences of crime, individual rights and responsibilities, and career opportunities in the legal system.

Speech 1 (Grade 7 only)

This high school course introduces students to the 6 traits of Public Speaking: Poise, Volume, Life, Eye Contact, Gestures, and Speed. Students participate in various activities that help improve their presentation skills. They also learn the competitive Speech events, such as Impromptu Speaking, Extemporaneous Speaking, Humorous Interpretation, Dramatic Interpretation, and Original Oratory. In addition, students compete in Speech and Debate tournaments throughout the county and earn National Speech and Debate Association (NSDA) points and membership into the NSDA Honor Society. This course is a pre-requisite for Debate 1 Honors.

Debate 1 LH (Grade 8 only)

This high school honors course is designed to introduce students to critical thinking, research, and presenting an argument. Students learn to make a claim, establish a warrant, present data, and analyze the impact of an issue. Through Debate 1 Honors, students become well-versed in rhetoric (ethos, pathos, logos) and current events, and are able to articulate a point of view clearly and succinctly. The public speaking skills learned in Speech 1 are reiterated throughout Debate 1. Students learn the competitive Debate events, such as Lincoln Douglas Debate, Public Forum Debate, and Congressional Debate. Likewise, students are expected to compete in Speech and Debate tournaments and earn NSDA points.

Creative Writing (Grade 8 only)

The purpose of this course is to enable students to develop and use grade 9-10 writing and language skills for creative expression in a variety of literary forms. Studying and modeling a variety of genres will be emphasized at this level of creative writing.

Spanish I (Grades 7 & 8)

Spanish 1 introduces students to the target language and its culture. The student will develop communicative skills in all 3 modes of communication and cross-cultural understanding. Emphasis is placed on proficient communication in the language. An introduction to reading and writing is also included as well as culture, connections, comparisons, and communities

Spanish II (Grade 8 only)

Spanish 2 reinforces the fundamental skills acquired by the students in Spanish 1. The course develops increased listening, speaking, reading, and writing skills as well as cultural awareness. Specific content to be covered is a continuation of listening and oral skills acquired in Spanish 1. Reading and writing receive more emphasis, while oral communication remains the primary objective. The cultural survey of the target language-speaking people is continued.

Business and Entrepreneurship Principles Honors (Grade 8 only)

This course is designed to provide an introduction to business organization, management, and entrepreneurial principles. Topics include communication skills, various forms of business ownership and organizational structures, supervisory/management skills, leadership skills, human resources management activities, business ethics, and cultural diversity. Emphasis is placed on job readiness and career development. The use of computers is an integral part of this program.

Advanced IT Honors (Grade 8 only)

This course is designed to provide a basic overview of current business and information systems and trends, and to introduce students to fundamental skills required for today's business and academic environments. Emphasis is placed on developing fundamental computer skills. The intention of this course is to prepare students to be successful both personally and professionally in an information-based society. Advanced Information Technology includes the exploration and use of: databases, the internet, spreadsheets, presentation applications, management of personal information and email, word processing and document manipulation, HTML, web page design, and the integration of these programs using software that meets industry standards. After successful completion of this core course, students will have met Occupational Completion Point A, Information Technology Assistant - SOC Code 15-1151.

Psychology (Grade 8 only)

Through the study of psychology, students acquire an understanding of and an appreciation for human behavior, behavior interaction and the progressive development of individuals. The content examined in this first introductory course includes major theories and orientations of psychology, psychological methodology, memory and cognition, human growth and development, personality, abnormal behavior, psychological therapies, stress/coping strategies, and mental health.

Digital Information Technology (Grade 8 only)

This course is designed to provide a basic overview of current business and information systems and trends, and to introduce students to fundamental skills required for today's business and academic environments. Emphasis is placed on developing fundamental computer skills. The intention of this course is to prepare students to be successful both personally and professionally in an information based society. Digital Information Technology includes the exploration and use of: databases, the internet, spreadsheets, presentation applications, management of personal information and email, word processing and document manipulation, HTML, web page design, and the integration of these programs using software that meets industry standards. After successful completion of this core course, students will have met Occupational Completion Point A, Information Technology Assistant - SOC Code 15-1151
