

Global Environmental Science

The Global Environmental Science theme covers a broad range of environmental concerns, with primary attention given to those issues of most importance to South Florida's fragile ecosystems. Students benefit from an interdisciplinary curriculum that focuses on many challenges and concerns related to land dwelling wildlife preservation, aquatic wildlife preservation, taking care of the Earth, Florida's environmental issues, the tropical rain forest, and interdependence of the Earth's ecosystems. Students have access to computer facilities, modern science and mathematics laboratories, the outdoor nature trail, and environmental learning centers.

Field Trips

Field trips are an important part of our student magnet experience. The real life experiences that occur during a field trip allow our students to authentically connect to their curriculum. Back at school this knowledge is applied and synthesized during learning activities to create higher order inquiries and projects. They also experience global environmental issues first hand through field trips.

Science Specials

Research shows authentic engagement, project based learning, and hands on activities are keys to student learning and academic achievement. Our magnet students have a dedicated Specials Science class in our Science lab where hands activities are facilitated. Palmview has multiple outdoor classrooms including two butterfly gardens where students study scientific concepts such as life cycles, camouflage, and adaptation.

Throughout the hallways of Palmview, students also experience our magnet environment where our own Art teacher, Mrs. Bonavia, has painted Florida wildlife. Identifying the plants and animals in our habitat gives every student the opportunity to connect to and take ownership of knowing our environment, and becoming global citizens.
