SUBJECT: **STUDENT INCIDENTS AND SUSPENSIONS IN BROWARD COUNTY PUBLIC SCHOOLS, 2009-10 THROUGH 2011-12**

The attached research brief examines students' behaviors and suspensions in Broward County Public Schools from the 2009-10 through 2011-12 school years. The report analyzes behavioral violations (incidents) and suspensions from various perspectives. At each school level, disruptive behavior was reported as the most common type of incident. Overall, the total number of incidents and suspensions decreased substantially from 2009-10 to 2011-12. However, these data indicate that, over the three years of the study, Black students in the District had a larger number and rate of incidents, and are suspended in larger numbers, and at higher rates, than their ethnic counterparts.

Another major finding was that although the total number of suspensions declined sharply by more than 13,000 suspensions, the suspension rate only decreased by 1.4 percentage points, which indicates an increase in the number of students suspended multiple times during the school year.

Total incidents were reviewed whether or not they resulted in a suspension. This examination enables the District to determine the proper intervention programs needed at specific schools to improve student behavior and reduce the number of school suspensions. The data also, suggests that schools' implementation of discipline actions are based on the type and severity of the incident, as it relates to the Discipline Matrix rather than factors, (race, Supplemental Educational Services, disability, etc.) not related to the student's action.

The rate at which a particular incident was repeated after resulting in a suspension (grade six and nine) were examined to determine whether suspension was an appropriate deterrent for specific behavior violations. The highest types of incident reoccurrence after a suspension for the same behavior type, was disruptive incidents for both sixth and ninth grade students. The data also indicated that for all incident types except disruptive, less than 50% of students that receive a suspension for a specific incident type repeat that same offence.

# Research Brief

## **AN ANALYSIS OF BEHAVIOR INCIDENTS AND SUSPENSIONS IN BROWARD COUNTY PUBLIC SCHOOLS, 2009-10 through 2011-12**

Student behavior and discipline were examined in Broward County Public Schools (BCPS). Behavioral violations (incidents) were examined in accord with suspensions to investigate causes of the discipline issues. This brief reports disciplinary practices concerning in-school suspensions, out-of-school suspensions, and alternatives to external suspension (AES) in BCPS and the incidents that incur a student suspension. Districtwide data, including incidents and suspensions occurring at both non-charter and charter schools, was reviewed. Examination of specific incidents that resulted in student suspensions, enables school and District staff to target intervention programs that improve student behavior and ultimately reduce the number of school suspensions.

The District's Code of Student Conduct 2011-2012 (School Board Policy 5.8) provides specific information regarding the rules to which all students are expected to adhere, as well as consequences for violations (The School Board of Broward County, Florida, 2011). To help school staff apply consistent, appropriate consequences for behavior violations, the District's Discipline Matrix was developed; and implemented at the beginning of the 2004-05 school year across BCPS. Separate matrices assign consequences at the elementary and secondary levels. Both the Code of Student Conduct and the Discipline Matrix are reviewed annually by District stakeholders, including parents, teachers, administrators, counselors, and other community representatives (The School Board of Broward County, Florida, 2011).

According to National Association of School Psychologists, "Effective discipline is essential to creating safe, supportive learning environments for all students, which is critical to academic achievement" (Olley, 2010). However, these same experts also agree that a strict zero tolerance policy is counterproductive. In fact, research indicates that a general use of suspensions as punishment does not correct misbehavior over time, but it will actually contribute to increased misbehavior, lack of academic achievement, an elevated dropout rate, and increased juvenile delinquency (Bear, 2010).

For many years the Broward County School Board has supported the use of alternative behavior modification strategies in addition to suspensions. The District's AES program was implemented in 1995-96 as a collaborative effort among school administrators, parents, and community leaders to offer instructional support, individual/group counseling, behavioral intervention, and other support services to students who would otherwise be suspended from school activities. The purpose of this program was to provide an opportunity for students to continue their academic studies in a structured environment separate from both school and home.

Because AES is voluntary, students and their parents may refuse AES placement, in which case, the suspension is noted as a “refusal,” and the student is assigned to out-of-school suspension. Students assigned to AES continue their academic studies in a structured environment at a location other than their regular school (Iskandar & Jones, 2004).

Data from three complete school years were examined. Disciplinary events registered during the summer are not included in the data. For each school year, the total population reflects the number of students, in grades Kindergarten to 12, who attended a BCPS school for at least five days during the school year.

- Suspensions were classified into three categories:
  - In-school (i.e., internal suspension),
  - Out-of-school (i.e., external suspension), and
  - Alternative to external suspension (AES). The AES program description is available on the District’s Dropout Prevention Alternative Education website ([http://www.broward.k12.fl.us/dropoutprevention/html/alternative\\_to\\_suspension.html](http://www.broward.k12.fl.us/dropoutprevention/html/alternative_to_suspension.html)).
  
- Incidents were classified into eight categories (aligning to the District’s Discipline Matrix). Further detail of the incidents that make up each category is available on Appendix I. The eight incident categories are:
  - Attendance
  - Rules Violation
  - Disruptive
  - Substance Abuse/Drug
  - Acts Against Persons
  - Property
  - Other Criminal
  - Bus

## Results

### *Incidents*

Behavior violations for the past three years were examined to identify trends. These data include both incidents that resulted and did not result in suspensions. Figure 1 illustrates the proportion of total incidents accounted for by each type of behavioral incident. At each school level, disruptive behavior was reported as the most common type of incident. Incidents related to attendance and rules violations make up more of the total incidents as students progress towards the high school level. Also, incidents related to acts against persons account for less of the total incidents as students progress towards the high school level. The figure shows the break down for the 2011-12 school year; the distributions were found to be similar for the previous school years. For each figure and chart in this report percentages are rounded to the nearest whole percentage point.

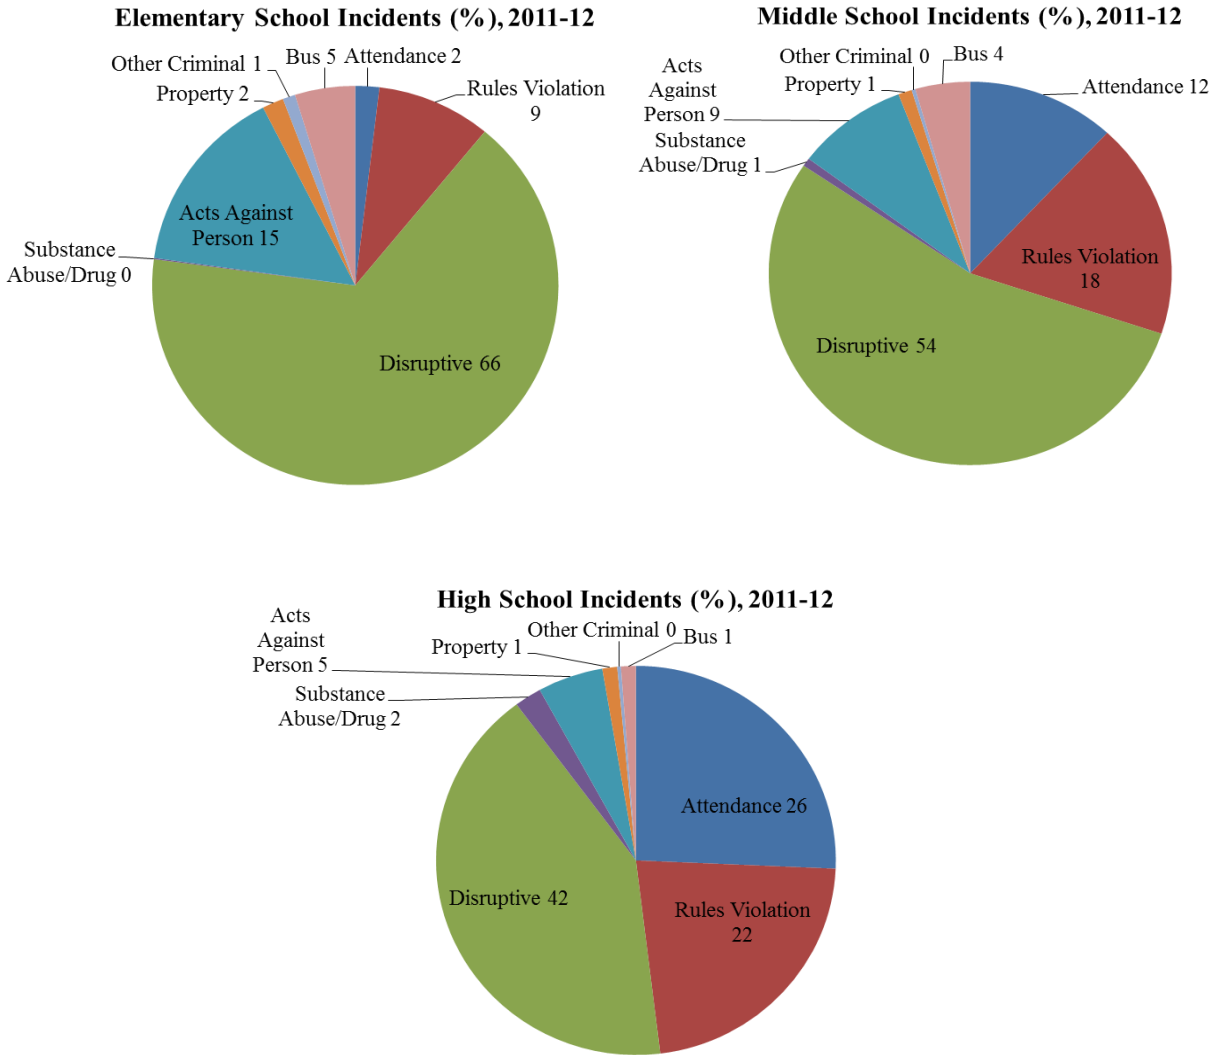

Figure 1. Percent of an incident occurrence by type, by school level, 2011-12.

While Figure 1 illustrates the relative prevalence of the various behavior incidents, it does not inform as to how common the incidents are among the student population. Figure 2 puts the incidents into the context of the student population. The figure displays the percent of students who committed incidents, by school level for the previous three school years. Overall, the rate of incidents has decreased over the past three years, which was most evident in disruptive, attendance, and rules violations incidents. At each school level, disruptive behavior was reported as the most common type of incident. While disruptive behavior has decreased across each of the years examined, it has continued to be a concern. Incidents related to attendance tend to increase as students progress towards the high school level. However, middle schools reported the highest rates of rules violations, disruptive behavior, and acts against persons.

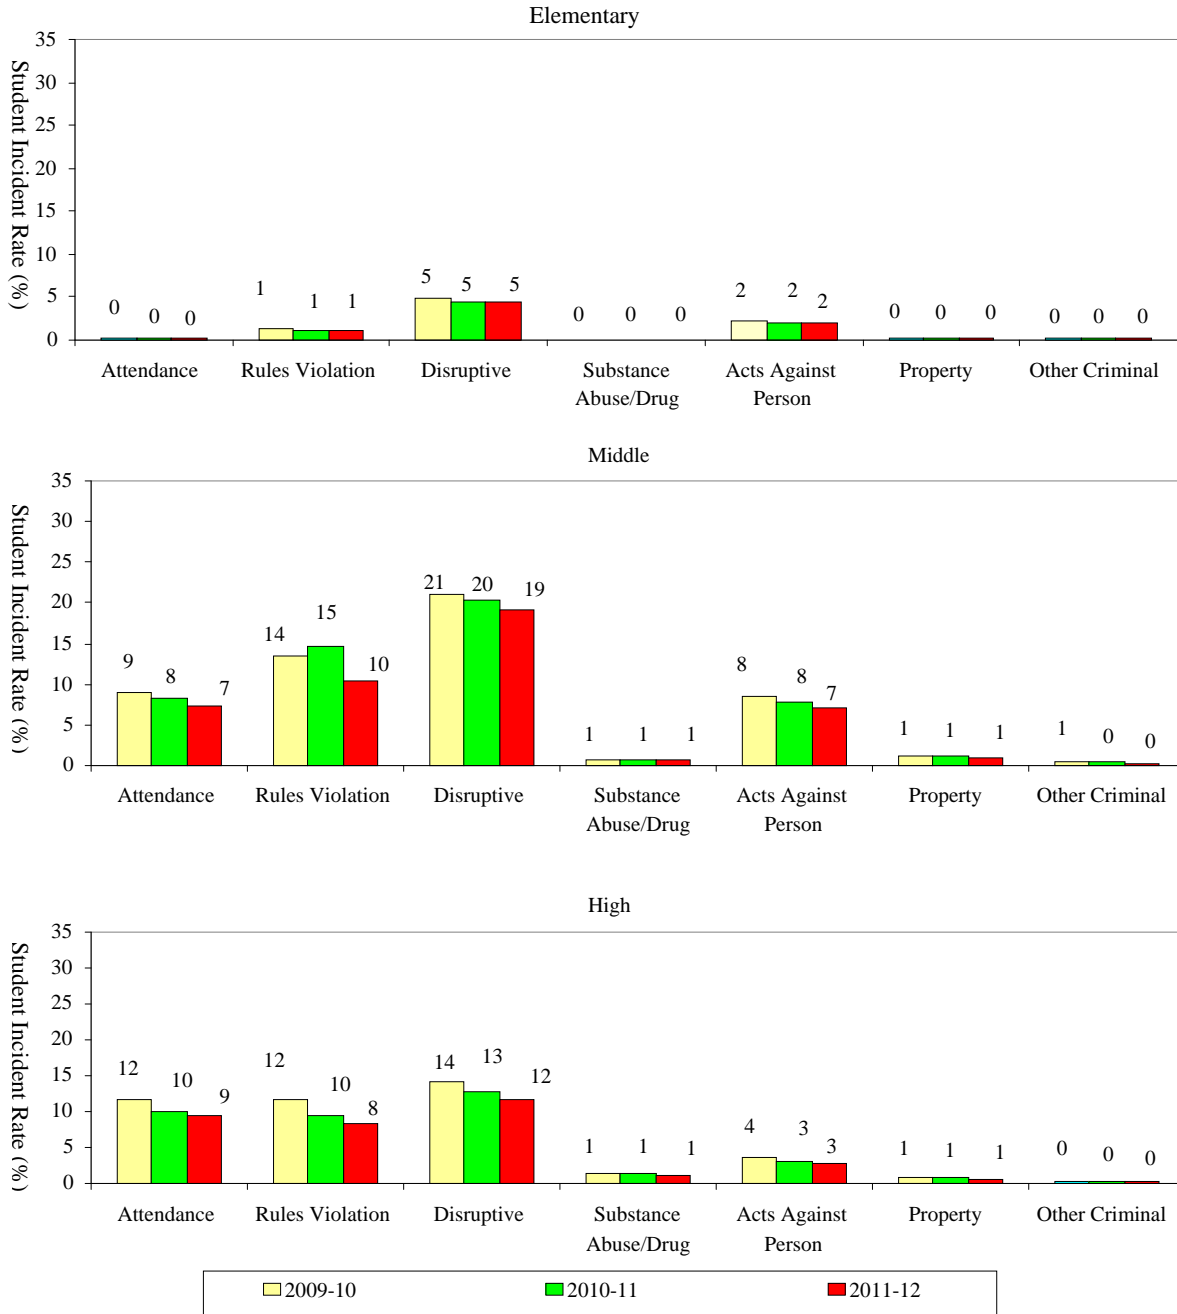

Figure 2. Percent of students who committed an incident by type of occurrence, by school level, and school year.

Incidents involving Black, Hispanic, and White students were examined and compared. Figure 3 illustrates the relative distributions of incidents as committed by each of the three major race/ethnicity groups. Inspection of these charts suggests that there are differences in the types of incidents across student groups. More than half of the incidents involving Black students were classified as disruptive behavior (55%) while disruptive behavior comprised less than half of the incidents committed by Hispanic (44%) and White (47%) students. Rule violations

comprised a larger proportion of incidents among Hispanic (22%) compared to Black students (16%).

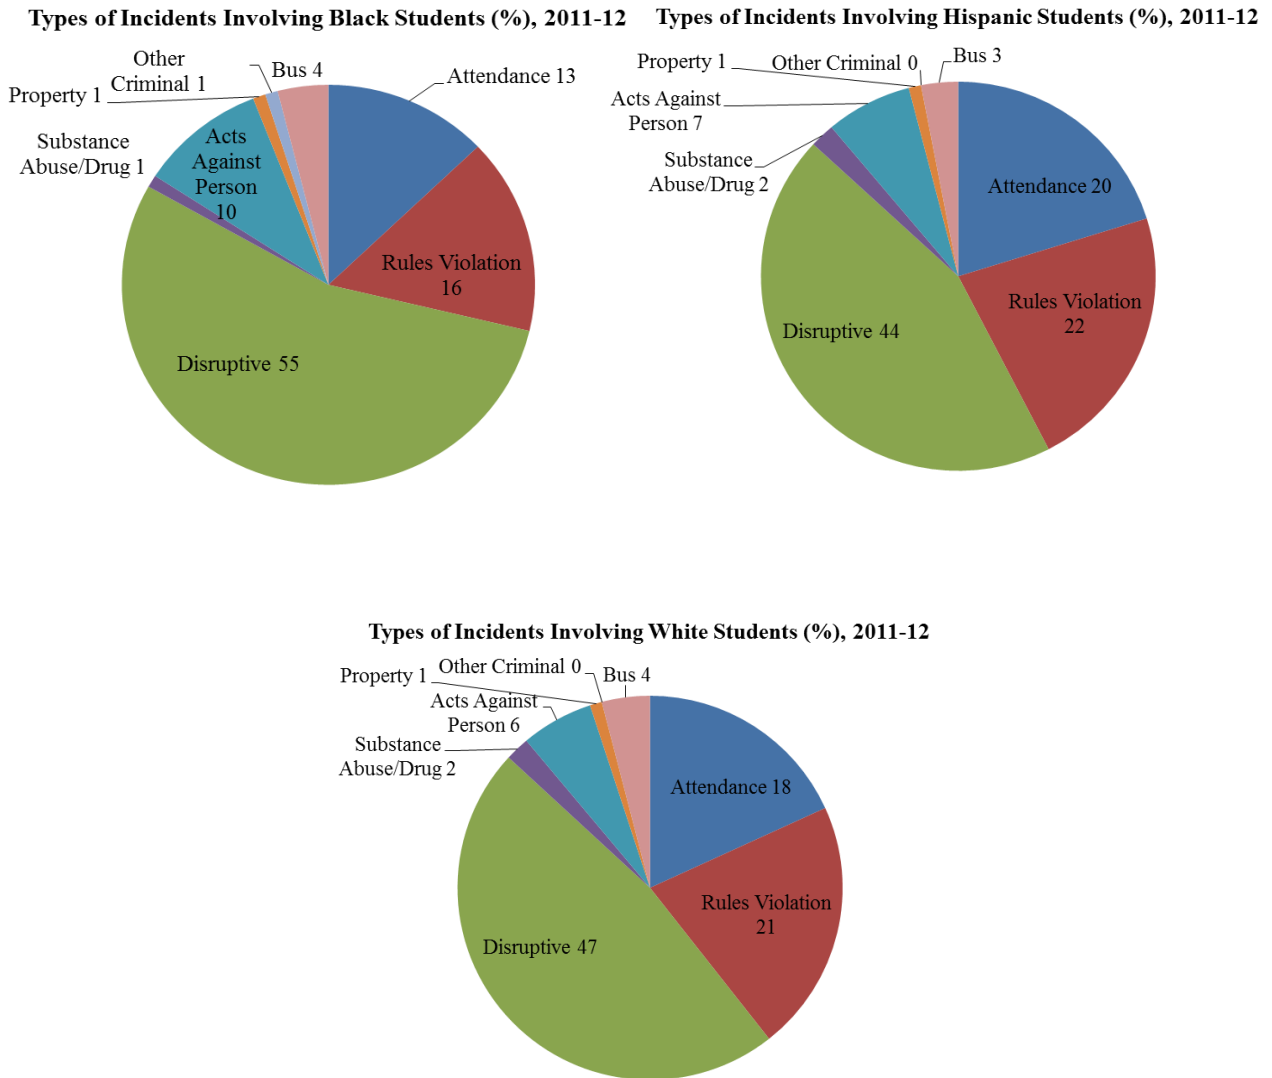

Figure 3. Percent of an incident occurrence by type, by students' race/ethnicity, 2011-12.

Figure 4 places the incidents into the context of the student populations over the past three years. The figure displays the percent of Black, Hispanic, and White students who committed a specific incident type. The highest rate of disruptive, rule violation, acts against persons and attendance incidents was registered by Black students, followed by Hispanic and White students for all three years. White and Hispanic students recorded similar incident rates for all three school years. Overall, student incidents decreased across all three school years for Black, Hispanic, and White students.

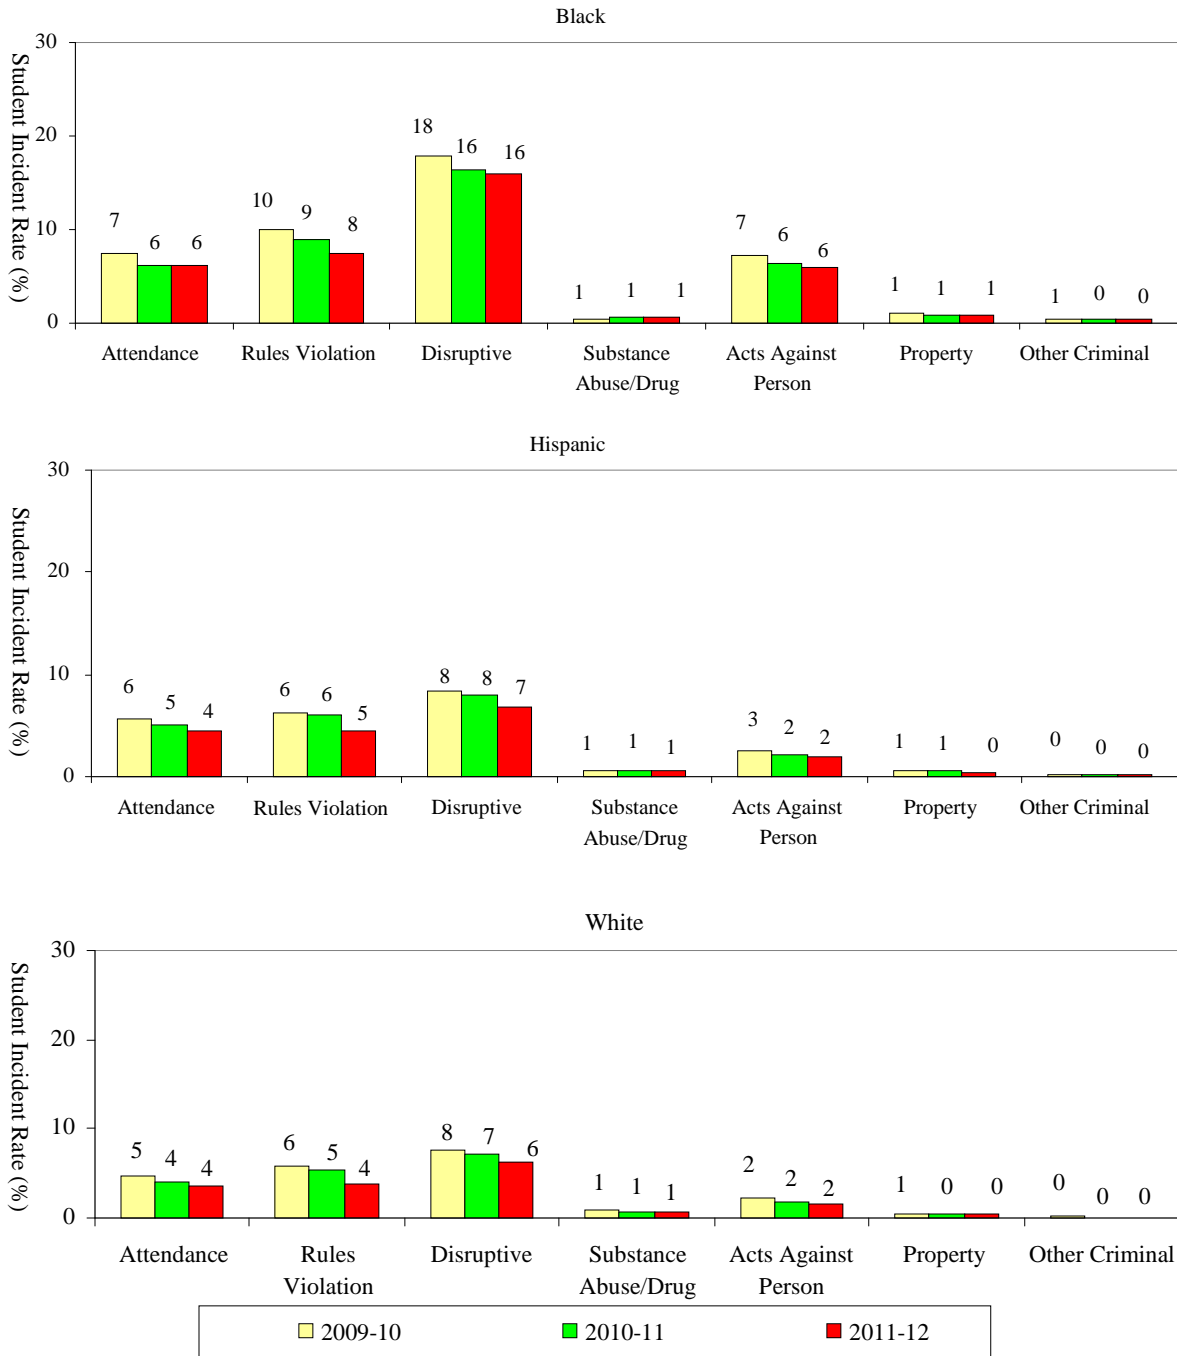

Figure 4. Percent of students who committed an incident by type of occurrence, by students' race/ethnicity and school year.

### Suspensions

While student incidents can be used to target intervention programs that improve student behavior, suspensions must be examined to ensure students are learning in a safe and supportive environment. The District's Discipline Matrix specifies whether a suspension is warranted for each behavior incident. Overall suspension rates were examined as a first step towards review of

the use of suspensions in the District. Data representing Districtwide in-school, out-of-school, and AES rates appear in Figure 5. These data follow a similar pattern found among incidents; elementary suspensions remained stable but decreases in suspensions at the middle and high school levels were evident. During the most recently completed school year, 2011-12, the largest student suspension rate was internally suspended students at the middle schools (17%). Among elementary, middle, and high schools, the highest rate of student suspensions was in-school suspensions. All suspension type rates at middle, high, and center schools decreased over the three year period. Elementary schools had consistent rates for out-of-school and AES suspension types for all three school years; the in-school suspension rate decreased slightly over the three year period. Centers had a different pattern; the out-of-school rate was the same as the in-school suspension rate; however, both rates decreased across the three years examined.

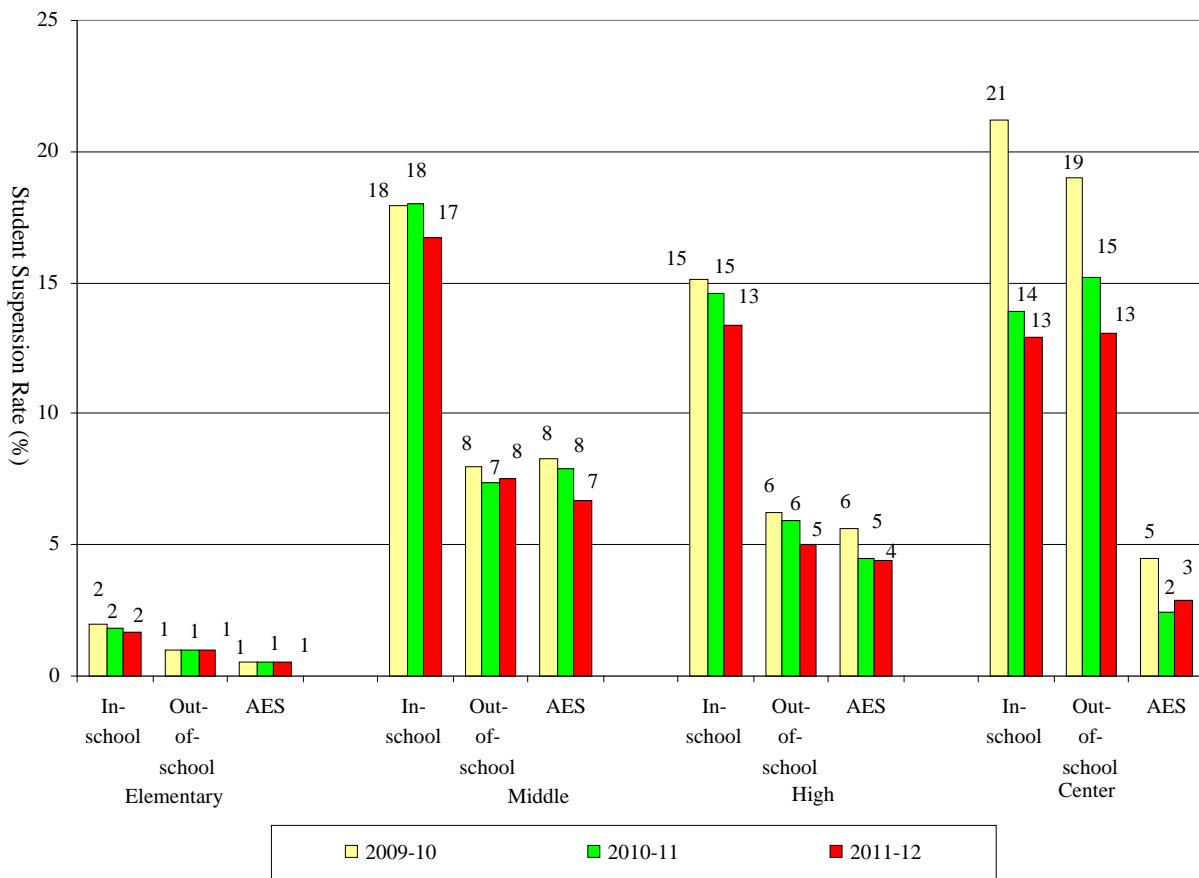

Figure 5. Suspension rates for Elementary, Middle, High, and Center school students by type of suspension and school year.

Suspension rates among the District’s three largest ethnic/racial groups are displayed in Figure 6. Any student receiving an internal, external, or AES suspension are included in the analysis. These data indicate that, across all years, the rates for all types of suspensions were higher among Black students, compared to the rates registered by Hispanic or White students. During the most recent completed school year, 2011-12, the overall suspension rate for Black students

was 18%, compared to 9% and 8% for Hispanic and White students, respectively. Hispanic and White students registered suspension rates similar to each other across years and by type of suspension. For all three groups, the rates of all suspension decreased across the three school years.

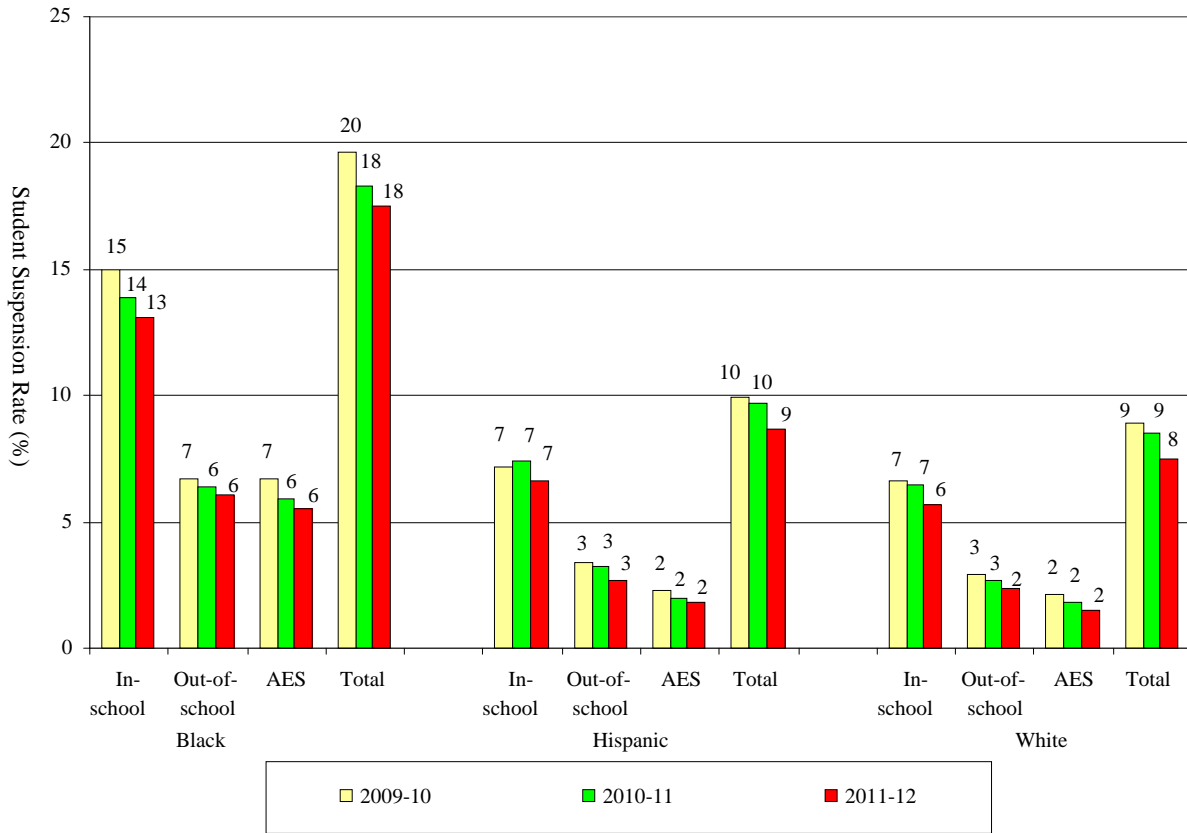

Figure 6. Suspension rates for Black, Hispanic, and White students by type of suspension and school year.

Figure 7 presents the rate that an incident resulted in a suspension by incident category, disaggregated by race/ethnicity. The data suggest that behavior violations resulted in suspensions at similar rates for all race/ethnicity groups. Black students registered slightly higher rates than White and Hispanic students for attendance (four and two percentage points) and rules violations (six and three percentage points). However, Black students registered slightly lower suspension rates than White and Hispanic students for acts against persons (three and two percentage points) and property (six percentage points each).

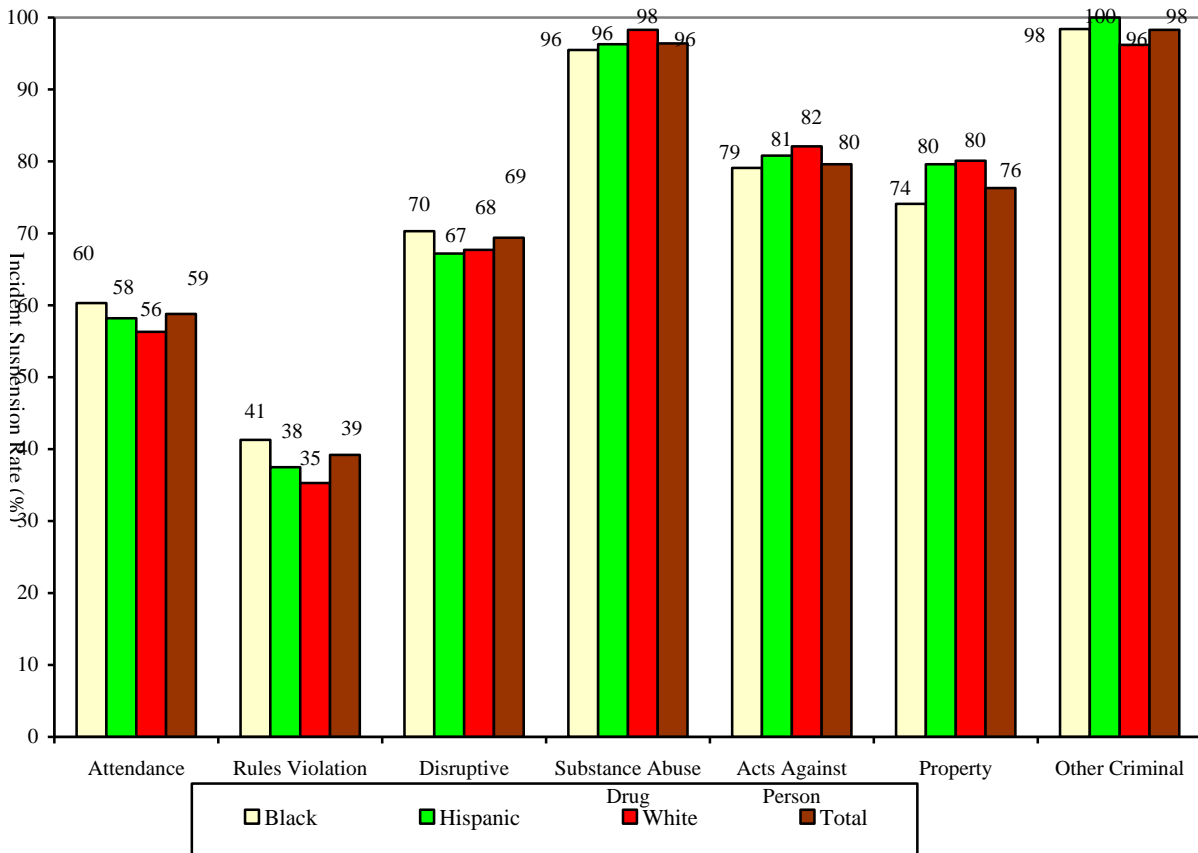

Figure 7: Rate of incidents resulting in an internal, external, and/or AES suspension by race/ethnicity, 2011-12.

The final figure illustrates whether suspension was an effective deterrent for specific behavior violations. Figure 8 presents, for sixth and ninth grade students, the rate at which a specific incident is repeated after resulting in a suspension as well as the incident rate as a comparison. For this data investigation only grade six and nine students were selected in order to reduce the potential impact of staff perceptions based on the students' prior behavior. A student is classified as a 'repeat offender' if a behavior type re-occurs following a suspension for the same behavior (time intervals were measured by marking period). The incident rate provides a baseline for a particular incident occurrence. Comparing these two rates suggest whether suspension was an effective deterrent for a particular incident. The highest types of incident reoccurrence after a suspension for the same behavior type, was disruptive behavior incidents for both sixth and ninth grade students. While 12% of sixth grade students were initially suspended for disruptive behavior incidents, 61% of those students committed a disruptive behavior

violation later in the school year. As seen in the figure, large gaps between the incident rate and the reoccurrence rate of attendance, rules violation, disruptive behavior, and acts against person incidents suggest the need for further review of these incidents at future discipline matrix meetings. The data shows that for all incident types except disruptive behavior, less than 50% of students that receive a suspension for a specific incident type repeat that same offence again that year. However, a simple cause (suspension) and effect (non-incident recurrence) cannot be assumed. For example a suspension incurred for property damage may also require parent/guardian to pay restitution creating greater emphasis to the student regarding the negative impact of the behavior. Some incident category types, such as disruptive behavior, have a broad definition therefore some incident types may not reflect ‘true’ similar behaviors. Appendix F provides the number of incidents for sixth and ninth grade students and the rate a specific incident type is repeated prior to resulting in a suspension.

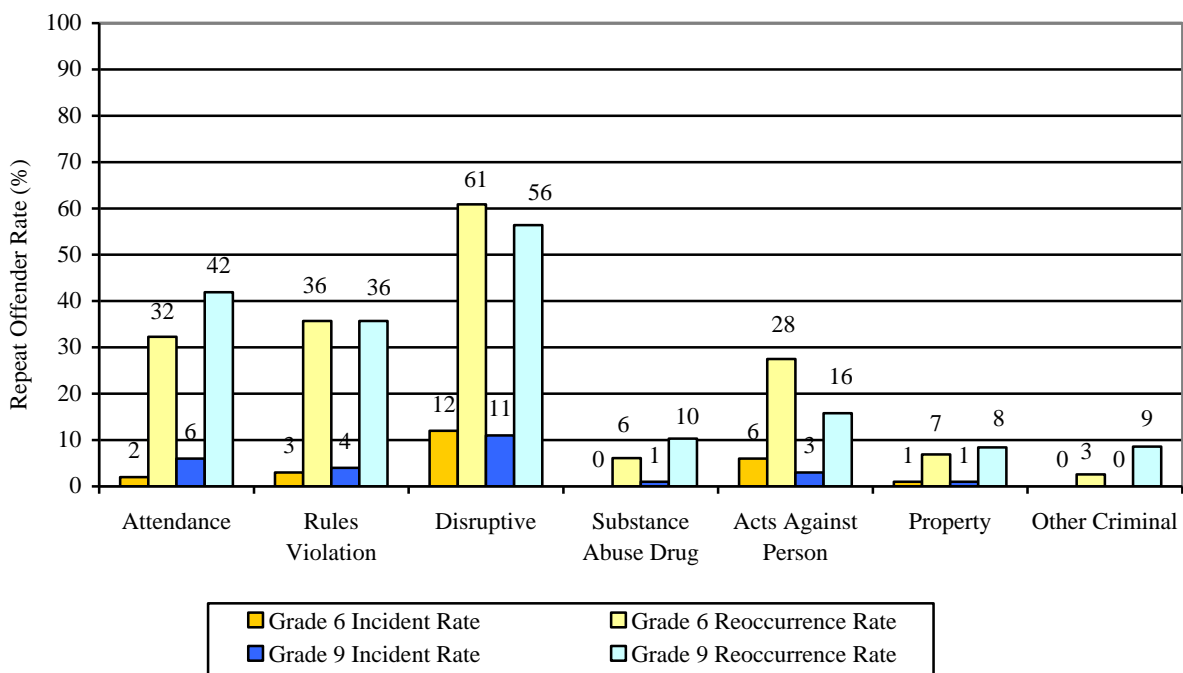

Figure 8: Rate of sixth and ninth grade students repeating a specific incident after same incident resulting in a suspension, 2011-12.

## Detailed Appendices

Detailed data summaries are provided in the appendices:

### Appendix A:

Table A-1: Total number and rate of incidents by school level, 2009-10 through 2011-12

Table A-2: Total number and rate of students who committed incidents by school level, 2009-10 through 2011-12

### Appendix B:

Table B-1: Total number and rate of incidents by student race/ethnicity, 2009-10 through 2011-12

Table B-2: Total number and rate of students who committed incidents by student race/ethnicity, 2009-10 through 2011-12

Appendix C: Total number and rate of suspensions and students suspended by school level, 2009-10 through 2011-12

Appendix D: Total number of suspensions by student race/ethnicity and special populations, 2009-10 through 2011-12

Appendix E: Total number and rate incidents assigned a suspension by student race/ethnicity, 2011-12

Appendix F: Number of sixth and ninth grade students repeating a specific incident after same incident resulted in a suspension, 2011-12.

Appendix G: Total number of incidents by school, 2009-10 through 2011-12

Appendix H: Total number of suspensions by school, 2009-10 through 2011-12

Appendix I: Incidents categories specifics

## Summary and Discussion

The present study represents a comprehensive investigation of incident occurrences and suspension rates in BCPS. Review of the data detailed in the appendices reveal the following findings:

### *Overall trends in incidents and suspensions*

- The total *number* of incidents decreased by 22% from 171,614 in 2009-10 to 133,646 in 2011-12 (Appendix A, Table A-1).
- For all three school years the largest *number of incidents* occurred at middle schools from 45% ( $n=77,245$ ) in 2009-10 to 46% in 2011-12 ( $n=61,285$ ), followed by high schools from 38% ( $n=62,527$ ) in 2009-10 to 35% ( $n=46,963$ ) in 2011-12 (Appendix A, Table A-1).
- Overall, the total number of suspensions decreased by almost 14% from 95,005 in 2009-10 to 81,956 in 2011-12 (Appendix D).

- Across all school years, the largest *number of suspensions* occurred at middle schools from 47% ( $n=44,181$ ) in 2009-10 to 48% in 2011-12 ( $n=39,257$ ), followed by high schools from 39% ( $n=37,278$ ) in 2009-10 to 40% ( $n=32,586$ ) in 2011-12 (Appendix D).
- Almost one fifth of middle, high, and center students were suspended at least one time during each of the three school years. Fewer than 3.0% of elementary school students were suspended at least once during the three school years under investigation (Appendix C).

### *Incidents*

- At all school levels disruptive behavior was the number one infraction for students who committed an incident (Figure 1 and Appendix A).
- The pattern of suspension rates across ethnic groups remained similar, regardless of the incident group, suggesting that students are suspended based on the infraction and not the racial/ethnic group (Figures 7 and Appendix E).

### *Suspensions by type and school level*

- Across all three school years, more than twice as many in-school suspensions were registered, compared to out-of-school suspensions, while AES placements constituted the least frequent disciplinary assignments of the three. During each of the three years, in-school suspensions and AES assignments constituted more than three quarters of all suspensions assigned. That is, less than one fourth of all suspensions removed the students from an academic environment (Figure 5 and Appendix C).
- The number of in-school suspensions and AES assignments were highest during the 2009-10 school year (Figure 5 and Appendix C).

### *Student subpopulations*

- Black students registered higher suspension rates than did Hispanic or White students. This was true for each type of suspension (Figure 6 and Appendix D).
- Across all years, Hispanic students registered a similar suspension rate as White students. (Figure 6 and Appendix D).

### *Action Steps*

The District has taken steps to ensure fairness and equity when determining disciplinary actions for students. The Discipline Matrix, which was introduced during the 2004-05 school year, was developed to assist school staff in making fair and equitable decisions related to the assignment and reporting of punitive actions. Schools are required by policy to use the Discipline Matrix as their guide in determining appropriate consequences for student infractions. Compliance with the Discipline Matrix is monitored by District staff. Information & Technology (IT) has developed reports designed to assist schools with the monitoring of incident and discipline data. These online tools are available through the School Reports Menu on the Data Warehouse Intranet website, as well as through the Behavioral and Academics Support Information System (BASIS). Furthermore, the BASIS tool will provide administrators and teachers with up-to-date, live data on academic, behavioral and social emotional risk indicators having an impact on student behavior, and academic success.

Administrators are trained annually on current discipline legislation and local policy. The trainings emphasize objectivity during the investigation, accurately interpreting student behavior and consistently determining age-appropriate consequences.

Beginning with the 2012-13 school year, all schools are required to develop a unique School-wide Positive Behavior Plan. It is a flexible document created to detail positive prevention and intervention strategies intended to reduce suspensions, expulsions, and law enforcement involvement at the school level. On-going monitoring and modifications of the plan should occur throughout the school year.

In addition, schools will be provided data outlining incidents resulting in suspensions. This data will drive strategic planning at the District and school-wide levels. Goals and interventions addressing these findings will be included in the District Strategic Plan, School-wide Positive Behavior Plan and School Improvement Plans.

Finally, future discipline reports from Student Assessment & Research will reflect specific incidents which are the root causes of suspensions. The data from these reports will assist school leaders in examining these cases by student sub-populations, so schools can target their interventions on the most prevalent behavioral concerns, and ensuring over-representation of minority groups is addressed.
